-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 5-7, 11, are rejected under 35 U.S.C. 102(b) as being anticipated by US 3769796 (Bechtold).

Bechtold discloses a rotary Rankine cycle comprising a turbine T and a condenser C, a plurality of chambers formed by walls (2, 3, 4) having liquid/vapor inside, passageways 49 for communicating fluid between the chambers and the condenser to rotate the turbine T.

Claims 1, 5-7, 11, are rejected under 35 U.S.C. 102(b) as being anticipated by US 4258551 (Ritzi).

Ritzi discloses a rotary cycle comprising a turbine 24 and a condenser CC, a plurality of chambers formed around nozzles 42, 85 having liquid/vapor inside, passageways 79, 83, for communicating fluid between the chambers and the condenser to rotate the turbine 24.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 8-10 are rejected under 35 U.S.C. § 103(a) as being unpatentable over U.S. 3769796 (Bechtold). Bechtold discloses all the claimed subject matter as set forth above in the rejection of claim 1, but does not disclose the offset positions of the condensers as claimed. However, it would have been obvious at the time the invention was made to a person having common knowledge in the art to locate the condenser of Bechtold at the offset positions as claimed for the purpose of ease of communicating the fluid to/from the condenser.

Claims 2-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Schlote, Doerner, Jirnov et al, and English, Jr. disclose rotary heat engines using solar energy.
